## **LAB 3**

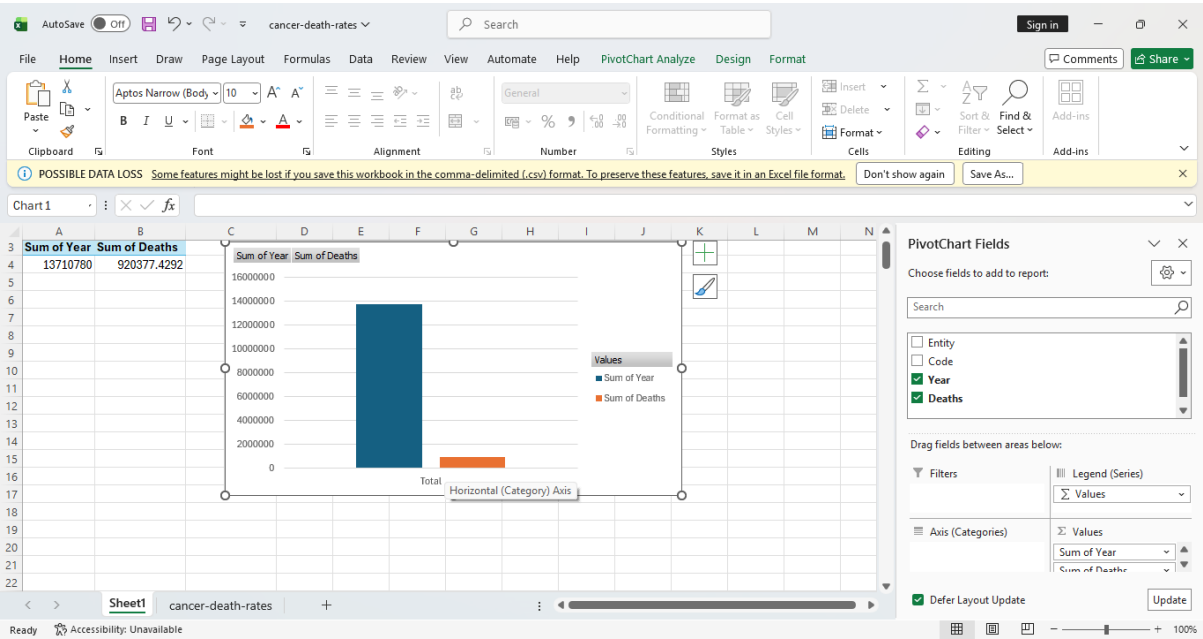

**HOME TASK:**

### **CANCER DEATH:**

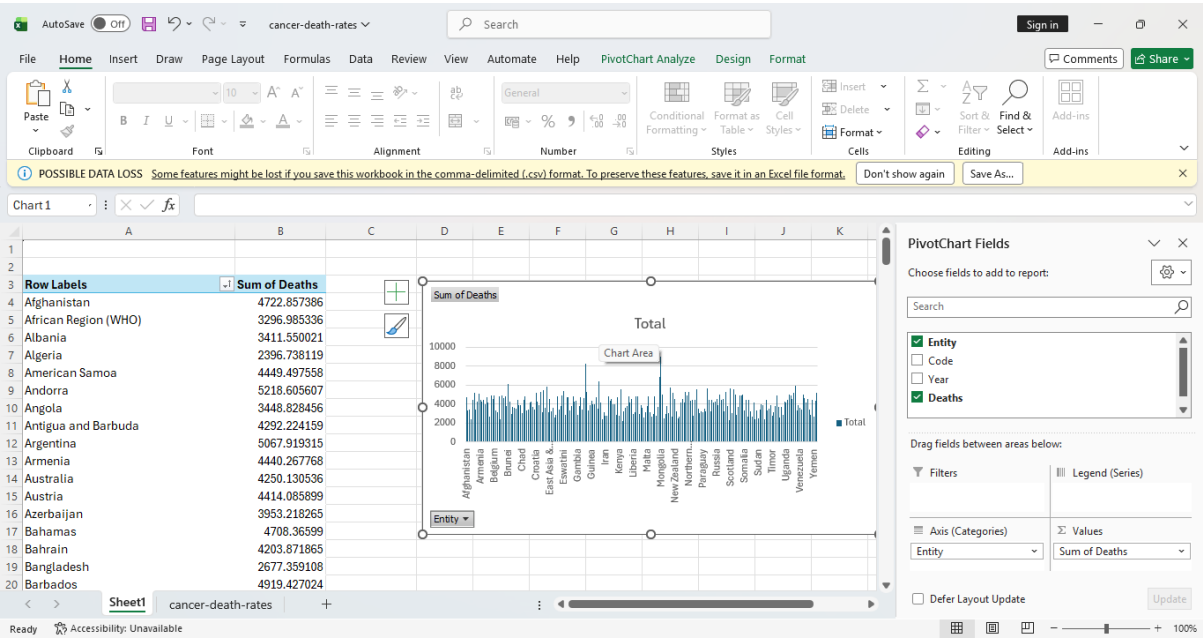

This image shows a PivotTable and PivotChart being used to summarize a dataset of cancer death rates by totalling the years for each country/entity.

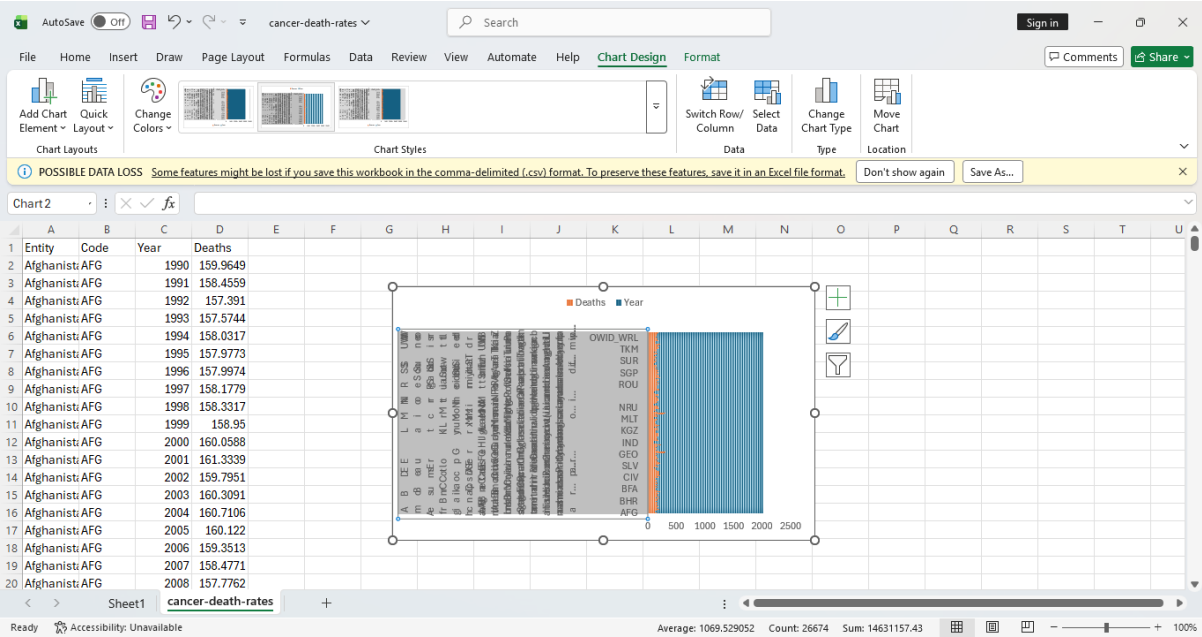

In this image, the "Deaths" field has been added to the Values area to compare the total sum of deaths against the sum of years in a single bar chart.

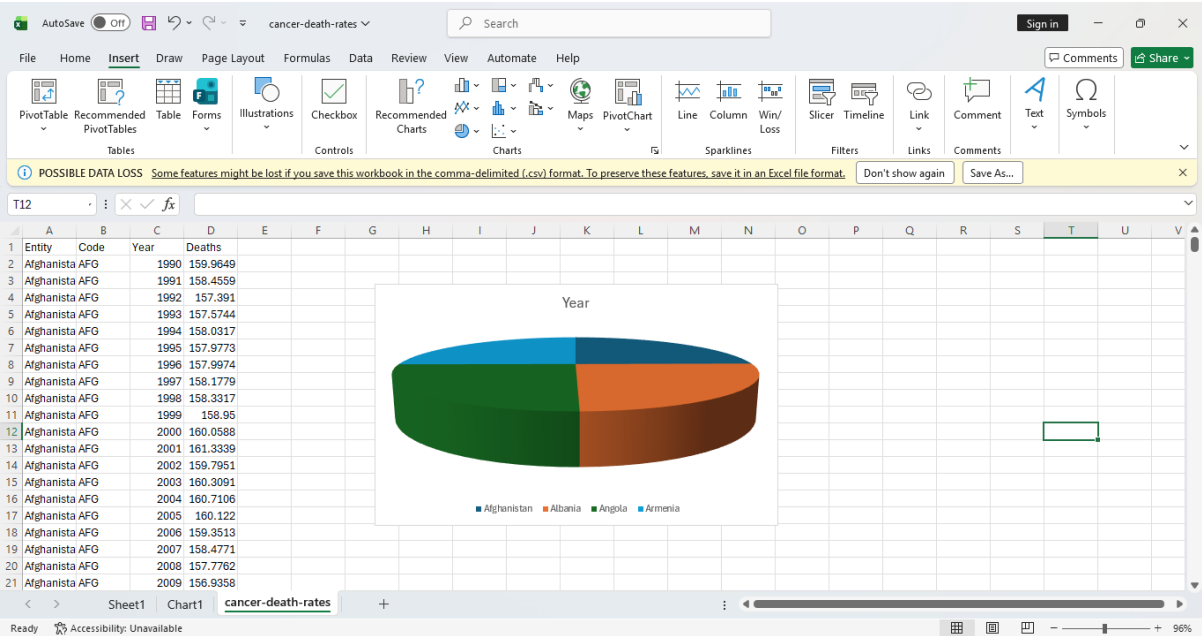

In this image, you have successfully filtered the data to show the total sum of deaths for each individual country on the chart.

In this image, you have switched to a horizontal bar chart to compare Deaths against Year for every record in the dataset.

In the final image, you have created a 3D Pie Chart to show the distribution of data across four specific countries: Afghanistan, Albania, Angola, and Armenia.

In this final image, you have created a Line Chart to visualize the trend of Deaths compared to Years over the entire timeline of the dataset.
